POLYURETHANE

INK FOR LEATHER SPRAY TOP 5485 CS

USE Fixative
 PHASE Water

INK FOR LEATHER SPRAY TOP 5485 CS is a medium-hard glossy fixative that forms a thin film with a silky feel typical of casein fixatives. Its balanced composition of polymers can guarantee excellent transparency with typical resistance of leather goods or furniture, maintaining the natural appearance required by aniline articles. It is recommended for use on leathers dyed with our exclusive INK FOR LEATHER series and then sprayed with the colors of INK FOR LEATHER SPRAY system, in order to obtain equalizing finishes, with natural look but with very high overall fastness. It can be used alone or with an addition of 10-50% of water and catalyzed with the series of our polyaziridinic cross-linkers such as PROXY® 2080, which does not alter its transparency and improves its fastness. It is also advisable to add 10% of a medium soft polyurethane, such as our PROXY® 2017, for soft items that need to be milled for a long time.
