POLYURETHANE

INK FOR LEATHER® SPRAY TOP 5485 WP

USE Fixative
 PHASE Water

INK FOR LEATHER® SPRAY TOP 5485 WP is a preparation that improves the protection of very natural leathers, such as aniline and semianiline. It forms a light film, with a pleasant touch and a natural semi-opaque appearance. Is is diluted in water 1: 1; it supports SYN-REX®, INK FOR LEATHER SPRAY and DHL® color additions in proportions of 30/40% and can be catalyzed with 1-2% of INK FOR LEATHER SPRAY CROSSLINKER 5483. To make the color even, we suggest to apply 2-3 light crosses. It can be ironed at 80 ° C without sticking to obtain an optimal film forming, but it is better to check the adhesion of other products, as it has a good resistance to water. It is recommended to use it after a first application with our INK FOR LEATHER SPRAY dyeing system for very elegant and high-performance items.
